AcidoGen[®]

Blend of Organic Acids & Essential Oils

High levels of production and efficient feed conversion are the need of the modern poultry industry, which to a certain extent can be achieved through use of specific feed additives. With greater emphasis towards minimal use of antibiotics, the situation has driven researchers to explore for other non-therapeutic alternatives like organic acids, enzymes, prebiotics, herbs, essential oils and Immunostimulants as feed additives in poultry production.

The addition of organic acids in diet can have a beneficial effect on the performance by decreasing pathogenic bacteria, improving digestion, & absorption of nutrients.

Use of organic acids composed of individual acids and blends of several acids have been found to perform antimicrobial activities similar to those of antibiotics (Wang et al. 2009)

Most common bacteria that affect the intestinal health of poultry are Salmonella, Campylobacter and Escherichia coli which can be controlled by supplementation of an organic acid in diet (Van Immerseel et al. 2006; Naseri et al. 2012)

Thus organic acids have gained worldwide acceptance as the choice replacement for antibiotic growth promoters (AGP's) in livestock feed.

Acidogen is a unique proprietary blend of selected organic acids and its salts along with essential oils which has following benefits:

- Reduces pH and checks growth of pathogenic bacteria, while favouring growth of beneficial bacteria.
- Acidification results in killing action in pathogenic bacteria like *Salmonella*, *E.Coli*, *Clostridium Perfringens*, *Listeria*, *Campylobacter* and other gram-ve bacteria.
- Improves enzyme efficacy and increases hydrolysis of proteins for increased nutrient absorption
- Prevents contamination of poultry feed by pathogens
- Does not alter palatability and nutritional value of other ingredients
- Improves carcass quality and minimizes drip loss
- Effectively removes biofilms when used in water lines
- AcidoGen is non-corrosive & has minimal loss due to evaporation

Usage:

- **Powder** : 1 Kg per ton of feed
- **Liquid** : 0.2 to 0.5 ml/ltr of water

Presentation:

25 Kg Bags and 5 Ltr Jars
